When 150-Crore of inventory had to be counted right, in 10 days

A leading retail chain engaged Sthiros to verify 150-Crores of multi-category inventory nationwide, scanning 8 Lakh+ barcodes with 100% coverage in just 10 days.

Client	Service	Sector	Geography
Leading Retail Chain	**Enterprise-Wide Multi-Category Inventory Verification**	**Retail, Multi-Category**	**India**

The Challenge:

When speed and precision both have to win

This retail chain needed 150 crores of inventory verified across sarees, apparel, groceries, appliances, and vessels, spanning 8 Lakh+ barcodes. Every category's verification logic and full audit defensibility had to be held within one 10-day, multi-shift window.

Scale vs Fixed Timeline
8 Lakh+ barcodes across every category, with only 10 calendar days to finish.

Multi-Category Complexity
Sarees needed item checks, groceries needed batch counts, appliances needed serials.

Multi-Shift Coordination
Round-the-clock shifts demanded one consistent method across every team, every zone.

Handover Continuity Risk
Any gap between shift teams risked missed zones or double-counted items.

Audit Defensibility
Every scan had to be traceable and reconciled, with zero room for disputed counts.

Resource Coordination
Core staff, articled assistants, and trainees had to mobilise fast, across shifts.

The Solution:

A structured four-phase programme, planned before a single scan

Sthiros ran a structured four-phase verification programme, planning every zone and shift before a single barcode was scanned, then executing multi-shift scanning with continuous quality checks.

Every scan was reconciled against system records, producing one audit-ready report with full barcode traceability across all categories.

Sthiros brought the planning, the discipline, and the execution capability to pull this off seamlessly across multiple shifts. The quality of the output was exceptional throughout.

The Methodology

1 Pre-Engagement Planning & Team Mobilisation

Locations mapped, scanning zones defined, and shift rosters set, with core professionals, articled assistants, and trainees mobilised across teams.

2 Structured Multi-Shift Execution

Barcode-by-barcode scanning across simultaneous shifts, with zone-based coverage ensuring no area was missed and no item double-counted.

3 Quality Controls & Real-Time Progress Monitoring

Supervisory reviews at every shift end flagged coverage gaps and discrepancies immediately, resolved before the next shift began.

4 Reconciliation, Reporting & Audit Output

Every scan reconciled against system records, producing a fully traceable, audit-ready verification report.

What This Means

Every barcode gets scanned, not sampled.

Ten days, zero coverage gaps.

Category logic isn't one-size-fits-all.

Outcomes

Rs. 150 Crore

Inventory verified

Across sarees, apparel, groceries, appliances, and vessels, in one engagement.

8 Lakh+

Barcodes scanned

100% coverage delivered with zone-based scanning and real-time monitoring.

650+

Mandays deployed

Structured, supervised field teams across multiple simultaneous shifts.

10 Days

Full engagement window

Complete, audit-ready verification delivered within a single fixed deadline.
