Governing 5,500 Crores of CAPEX spend, invoice by invoice, to zero audit findings

A leading aluminium manufacturer engaged Sthiros to govern 5,500 crores of CAPEX expenditure end-to-end, processing 15,000+ invoices with zero audit observations.

Client	Service	Sector	Geography
Leading Aluminium Manufacturer	**Project Expenditure Governance, Invoice Processing & Financial Controls**	**Metals & Mining, CAPEX**	**India**

The Challenge:

When scale outpaces manual reconciliation

This aluminium refinery's capacity expansion from 2 MTPA to 5 MTPA generated 15,000+ invoices worth Rs. 5,500 crores across hundreds of vendors. Every payment needed verification against current contracts and BOQs, with zero room for error under Big 4 audit standards.

Volume & Complexity
15,000+ invoices worth Rs5,500 Cr needed pre-audit review before any payment.

Contract Governance Risk
Frequent PO and BOQ amendments risked payments against outdated contract terms.

Payment Leakage
A large multi-vendor base risked overpayments, duplicate payments, undocumented spend.

Cash Flow Blind Spot
No forecasting framework tracked BG, LC, and treasury positions in real time.

Third-Line Audit Pressure
A Big 4 firm audited every cycle independently, with zero tolerance for findings.

Multi-Vendor Coordination
Contractors, designers, and suppliers all needed reconciliation and compliance.

The Solution:

Every invoice governed, from receipt to zero-observation record

Sthiros operated as an embedded Accounts Payable function, owning the full payment lifecycle across pre-audit review, SAP processing, vendor reconciliation, cash flow forecasting, and reporting.

Every invoice, contract amendment, and reconciliation entry was validated against Big 4 third-line review standards, with zero audit observations across every cycle.

Their end-to-end coverage, from invoice processing and vendor compliance to real-time MIS and tax advisory, gave us confidence in the integrity of our project financials.

The Methodology

1 Pre-Audit Review & Payment Processing

Every invoice checked for contractual entitlement, rate accuracy, PO alignment, and BOQ compliance before payment was authorised.

2 SAP Accounting Entries & Book Closure

All invoice, payment, and adjustment entries processed in SAP and verified against source documents at every period end.

3 Vendor Reconciliation & Contract Compliance

SAP records reconciled against vendor statements, with BGs, LCs, advances, and full and final settlements tracked end-to-end.

4 Cash Flow Management & Forecasting

Rolling 15-day cash flow forecasts, segregated by LC and cash payments, gave the treasury team visibility into liquidity needs.

5 Tax Compliance & Forex Advisory

GST and TDS verified across every CAPEX transaction, with incentive entitlements and forex requirements reviewed case by case.

6 Real-Time MIS & Structured Reporting

An outstanding invoice tracker, weekly consolidated reports, and BG/LC dashboards gave management real-time programme visibility.

What This Means

Zero audit findings, Big 4 verified.

Amendments get checked before payment.

Real-time visibility beats month-end surprises.

Outcomes

0

Audit observations

Zero findings across every independent Big 4 review cycle, validating the AP framework.

15,000+

Invoices governed

Pre-audit reviewed against current PO, contract, and BOQ terms before payment.

Rs. 5,500 Crore

CAPEX spend covered

Full-lifecycle Accounts Payable ownership across the sustaining CAPEX programme.

100%

SAP accounting accuracy

Every entry verified against source documents and accounting standards.
