Cutting manual effort by 70% across a healthcare GCC, headcount unchanged

A healthcare shared services organisation engaged Sthiros to build an Intelligent GCC blueprint, cutting manual effort by 70% across 10+ departments with a 100% audit trail.

Client	Service	Sector	Geography
Healthcare GCC, Name Withheld	**Intelligent GCC Blueprint, Automation & Data Engineering Architecture**	**Healthcare, GCC**	**India**

The Challenge:

When data islands cost more than headcount can fix

This healthcare GCC ran on Coupa and Oracle, propped up by Excel, SharePoint, and email-driven workflows. Every transaction volume increase demanded more headcount, since manual processing and swivel-chair integration were the only way work got done.

Manual Processing Risk
Manual entry and swivel-chair integration between Oracle and Coupa invited error.

Governance Gaps
Email-based workflows made a consistent, defensible audit trail impossible.

Headcount-Linked Scale
Transaction volume and headcount moved in lockstep, capping growth economics.

Operational Latency
No unified data layer existed, so management ran on last week's numbers.

Data Islands
Excel, SharePoint, and email workflows sat disconnected from Oracle and Coupa.

No Command Centre
Workflow orchestration failures left no single view of shared services performance.

The Solution:

Two pillars, replacing manual muda with Standard Work for Data

Sthiros built an automation layer across Finance, Procurement, and Compliance, then layered a data engineering and reporting pillar on top, turning fragmented systems into one governed data model.

Oracle Fusion BI, Coupa, and every automation bot now feed a single semantic layer, giving Finance, IT, and HR one shared source of truth.

The Methodology

Phase 1

Securing the Perimeter

Approval mechanisms and tracking workflows standardised to eliminate the security risks of manual Excel and email, achieving the prerequisite 100% audit trail.

Phase 2

Scale & Automation

10+ Python-based bots and OCR-enabled processing engines deployed across 10+ departments to handle high-volume transactional work.

Phase 3

Intelligence & Optimisation

10+ real-time dashboards rolled out, leveraging the unified data estate for predictive analytics and real-time KPI tracking.

What This Means

Duplicate invoices stop at the gate.

Real-time beats last week's news.

Scale without adding headcount.

Outcomes

70%

Manual effort reduced

200+ hours saved monthly across global functions through automation.

90%+

Duplicate detection accuracy

Automated engines virtually eliminated financial leakage risk.

10+

Departments transformed

Accounts Payable, Procurement, SCM, Finance, HR, IT, and Operations covered.

100%

Audit trail coverage

Every digital workflow fully traceable, replacing fragmented email approvals.
