Unifying a global fintech's finance operations across 9 entities and 6 countries onto one ERP

A global cross-border fintech platform engaged Sthiros to unify its multi-entity financial operations onto a single Zoho ERP ecosystem spanning six countries.

Client	Product Deployed	Sector	Geography
A Global Cross-Border Fintech Platform	**Multi-Country Finance ERP Implementation, Zoho Ecosystem**	**Neo Banking FinTech, Cross-Border NRI Remittance**	**US, UK, UAE, Canada, Singapore, Lithuania**

The Challenge:

When nine legal entities can't agree on one set of books

This organisation operated through multiple legal entities across the US, UK, UAE, Canada, Singapore, and Lithuania, running its accounting on separate platforms including Inkle for US operations and Xero for UK operations. As the organisation expanded internationally, managing financial operations across multiple systems and jurisdictions grew increasingly complex.

Fragmented Accounting Systems

Multiple accounting platforms ran across different countries, creating inconsistent financial processes and difficulty consolidating data.

Multi-Entity Financial Complexity

Nine legal entities across seven jurisdictions each required their own compliant accounting structure.

Expense Management Across Regions

Manual tracking of employee expenses across departments created inefficiencies in approvals and financial tracking.

Procurement Request Management

With no centralised procurement workflow, purchase requests required manual coordination across departments and entities.

Lack of Consolidated Financial Reporting

Leadership had no group-level financial view across multiple entities and jurisdictions.

The Solution:

One Zoho ecosystem, replacing fragmented systems entity by entity

Sthiros implemented a global Zoho ERP ecosystem across the organisation's entities, combining Zoho Books, Zoho Expense, Zoho Creator, and Zoho Analytics into one connected financial architecture.

Every legal entity now operates within its own compliant Zoho Books organisation, with expenses, procurement, and reporting flowing into one consolidated view for leadership.

The Methodology

1

Zoho Books, Global Finance Management

Implemented across every legal entity, each operating within its own Zoho Books organisation aligned to its regional accounting edition and local regulations.

2

Zoho Expense, Expense Automation

Configured across US and INDC domains, integrated with the corresponding Zoho Books organisations via secure access token integrations.

3

Zoho Creator, Procurement Management

A custom Purchase Order system built to raise, approve, and track procurement requests across every Zoho Books organisation.

4

Zoho Analytics, Consolidated Financial Reporting

Financial data synchronised from every Zoho Books organisation to generate consolidated statements and group-level visibility.

What This Means

One ledger, nine entities. | **Expenses post themselves.** | **Consolidation stops being a project.**

Outcomes

9

Legal entities unified

Brought onto one centralised Zoho ERP ecosystem across multiple jurisdictions.

6

Countries connected

US, UK, UAE, Canada, Singapore, and Lithuania, plus global operational entities, on one system.

4

Zoho modules deployed

Books, Expense, Creator, and Analytics working as one connected ecosystem.

2

Legacy systems retired

Inkle and Xero replaced with one standardised platform.
