Turning three deal-flow bottlenecks into one AI-orchestrated due diligence platform, in 36 weeks

A premier venture capital and investment advisory firm engaged Sthiros to architect VentureSight AI, an intelligent platform orchestrating the deal lifecycle from target identification to partner review.

Client	Service	Sector	Geography
A Premier Venture Capital and Investment Advisory Firm	**AI-Driven Due Diligence Platform Development, Cognitive Engineering**	**Venture Capital, Investment Advisory**	**India**

The Challenge:

When deal velocity is capped by manual diligence

This firm's path to growth was blocked by legacy inertia and ad-hoc manual processes. Operational bottlenecks weren't just inconveniences, they were structural risks limiting the firm's capacity to scale assets under management without a linear, unsustainable rise in cost.

Fragmented Data Ecosystems

Critical company intelligence sat siloed across MCA filings, public data, and LinkedIn, forcing exhaustive manual aggregation and capping how many targets could be evaluated without bloating headcount.

Manual Workflow Silos

Financial, Legal, Technical, and ESG tracks ran on non-standardised spreadsheets with no centralised document vault, diverting analysts from strategic work to administrative task-tracking.

Proactive Risk Blindspots

Without automated detection, red flags buried in dense financial and legal documents went unnoticed, causing deal fatigue and prolonged timelines.

The Solution:

Cognitive engineering, not just software automation

Sthiros architected VentureSight AI across a rapid 36-week, 5-sprint deployment, building a system that reads, synthesises, and flags risk with the nuance of an expert analyst, not just one that automates tasks.

Discovery, founder intelligence, governance tracking, workflow orchestration, and reporting now operate as one connected system, from target identification through to a partner-ready summary.

The Methodology

1 Discovery Engine & Unified Profiling

Automated ingestion layer pulling data from MCA, public data, LinkedIn, and company websites into a single-screen company overview with AI-generated confidence scores and source provenance.

2 Founder Pedigree & Cap-Table Intelligence

Leadership evaluated through work history and education mapping, visualised as a Founder Overlap Graph, with equity waterfalls generated automatically from MCA filings.

3 Governance & Compliance Tracking

NLP used to extract Key Audit Matters, CARO flags, actions, and GSTN compliance data, mapped to a visual Governance Heatmap for instant risk assessment.

4 Configurable DD Workflows

A custom Workflow Builder enforcing standardised tasks across Financial, Legal, Tech, and ESG tracks, with all materials managed in a centralised, version-controlled document vault.

5 Inter-Module Data Flow

Seamless orchestration from Discovery through to an automated DD Report Generator, with an AI Risk Scorer culminating in a partner-ready summary.

What This Means

Diligence at the speed of the deal.

Red flags surface before the meeting.

Analysts judge, the system reads.

Outcomes

36 Weeks

Rapid deployment timeline

Delivered across 5 structured sprints, from architecture to partner-ready product.

5

Core platform pillars

Discovery, founder intelligence, governance tracking, workflow orchestration, and reporting, built as one system.

4

Diligence tracks orchestrated

Financial, Legal, Technical, and ESG tracks, standardised under one workflow builder.

100%

Governance visibility

Automated identification of KAMs, CARO flags, actions, and GSTN delays across every target.
