Bringing 68 process areas into ISAE 3402 SOC compliance in 6 months flat

A technology operations support services company engaged Sthiros for an ISAE 3402 SOC 1 and SOC 2 readiness programme, closing 68 process areas within a fixed 6-month timeline.

Client	Product Deployed	Sector	Geography
Technology Operations Support Services Company	**ISAE 3402 SOC 1 & SOC 2 Readiness Assessment and Implementation**	**Technology Outsourcing, Telecom Support Services**	**Global**

The Challenge:

When 68 process areas have no documentation to certify against

This telecom outsourcer needed ISAE 3402 certification to demonstrate control effectiveness to clients, requiring compliance across 68 process areas and aligned documentation across 15 major categories for SOC 1 and SOC 2.

No Process Documentation
Missing or incomplete documentation across required processes, with no basic hygiene on policies and procedures.

No Standardisation
Multiple templates and tools ran with no common structure across teams.

No SOC Control Templates
No control templates existed for any of the 68 process areas requiring coverage.

No Evidence Capture
No proper evidence was captured across key control areas, leaving nothing audit-ready.

Technical Configuration Complexity
Firewalls and remote or onsite security configurations varied across a technically complex environment.

Shifting Scope & Timelines
Frequently varying scope, requirements, and timelines demanded a multi-skilled, adaptable team.

The Solution:

A three-part programme, from documentation to audit-ready evidence

Sthiros ran a structured ISAE 3402 readiness programme, building a content management framework, running audit and gap analysis, and automating policy and compliance tracking, closing all 68 process areas within a fixed 6-month timeline.

Two qualified auditors reviewed every category against SOC 1 and SOC 2 requirements, with automation embedded down to the transaction level for sustained compliance.

The Methodology

1 Content Management Framework

ISAE 3402 content management designed with a workflow structure, a SharePoint directory built across 68 process areas, and SOC 1 and SOC 2 control templates developed from scratch.

2 Audit & Gap Analysis

Two qualified auditors ran interim and final gap reports across every generic and specific area, reviewing policies and procedures and validating evidence category by category.

3 Automation & Data Structuring

Data cleaned and structured to ISAE requirements, with policy and content management automated to the transaction level and clients ranked by adherence.

What This Means

68 process areas, one framework.

Evidence lives in one repository.

Certification becomes a client differentiator.

Outcomes

68

Process areas certified

All 68 process areas brought into SOC 1 and SOC 2 compliance within a single programme.

15

Documentation categories aligned

Every major category standardised into one common SharePoint-based repository.

6 Months

Full readiness timeline

Every requirement closed within a single fixed engagement window.

2

Qualified auditors deployed

A dedicated security programme review team ran gap analysis across every process area.
